

Sample API Documentation

Automation Documentation Agent

1. Overview

The Automation Documentation Agent provides a comprehensive API for managing document workflows through Telegram, n8n, Notion, and GitHub integrations.

2. Authentication

All API requests require authentication using Bearer tokens.

Include the token in the Authorization header:

Authorization: Bearer your-api-key-here

3. Endpoints

3.1 Process Document

POST /api/v1/documents/process

Processes uploaded documents using AI

3.2 Generate Content

POST /api/v1/content/generate

Generates new documentation content

3.3 Publish to GitHub

POST /api/v1/github/publish

Publishes documents to GitHub repository

4. Request Examples

4.1 Process Document Request

```
{
  "file_id": "doc_123",
  "processing_type": "extract",
  "options": {
    "language": "en",
    "format": "markdown"
  }
}
```

5. Response Examples

5.1 Success Response

```
{
  "success": true,
  "document_id": "doc_123",
  "status": "completed",
  "result": {
    "extracted_text": "...",
    "summary": "...",
    "metadata": {...}
  }
}
```
